1. What Is MARKET-POS?

MARKET-POS is a full-stack, cloud-based Point of Sale platform built for modern Lebanese and regional businesses. It is not just a cashier screen — it is a complete business operating system that covers retail markets, delivery stores, cafés, and restaurants under one login.

Who is it for?

Business Type	What They Get
Supermarket / Mini-market	Full POS + inventory + suppliers + delivery
Café / Restaurant	Table management + KDS + reservations + gamified loyalty app
Multi-branch Business	Centralized SuperAdmin panel across all branches
Any shop wanting delivery	Built-in online storefront + order management

2. Why MARKET-POS Beats Every Other POS

vs. Square, Toast, Lightspeed, Loyverse, iiko

Feature	MARKET-POS	Square	Toast	Loyverse	iiko
Works without internet (offline cart)	✓	✓	×	Partial	×
Built-in online storefront	✓	Extra cost	Extra cost	×	×
Built-in café module with KDS	✓	×	✓	×	✓
Gamified loyalty app for customers	✓	×	×	×	×
AI-powered reorder & promo suggestions	✓	×	×	×	×
FIFO batch expiry tracking	✓	×	×	×	Partial
Lebanese VAT (11%) per-product	✓	×	×	×	×
Telegram delivery driver alerts	✓	×	×	×	×
Multi-store SuperAdmin panel	✓	Extra cost	Extra cost	×	✓
Real-time socket updates (floor/kitchen)	✓	×	Partial	×	✓
Customer games (slots, spin, trivia...)	✓	×	×	×	×
QR table ordering by customer	✓	×	Extra	×	Partial
Split bill (cash + card + pay later)	✓	×	Partial	×	✓
Profit/loss per product	✓	Partial	Partial	×	✓
Full audit log (every action tracked)	✓	×	Partial	×	✓
Arabic / English interface	✓	×	×	Partial	Partial
Local pricing (no USD subscription trap)	✓	×	×	×	×
Product variants (size, color, etc.)	✓	✓	✓	✓	✓
Pay-later / credit account per customer	✓	×	×	Partial	×

The 3 Unique Differentiators

1. AI Business Intelligence (built-in, no extra cost) No other regional POS gives you AI-generated reorder lists and promotional suggestions based on your own stock velocity and batch expiry dates.

2. Gamified Café Customer App Customers scan a QR code at their table, order from their phone, earn loyalty points, and play 5 different games (Slot Machine, Spin Wheel, Scratch Card, Mystery Box, Trivia) to win points redeemable for free items. No other POS in the region offers this.

3. Full End-to-End Delivery The system creates a public storefront automatically. Customers order online, the admin approves, the cashier gets the cart injected into the POS automatically, and the driver gets notified via Telegram.

3. Module Overview

4. Feature Deep-Dives

4.1 Core POS & Checkout

The checkout screen is the heartbeat of the system. It is designed to be fast — a trained cashier can complete a transaction in under 15 seconds.

Checkout Capabilities:

- **Barcode scanning** — scan any product barcode to add it instantly
- **Quick search** — type product name to find and add items
- **Category grid** — tap category tiles to browse products visually
- **Product images** — thumbnail display on every product card
- **Product variants** — select size, color, or other variant at checkout
- **Quantity editing** — tap quantity to type or use +/- buttons
- **Per-item discounts** — apply a discount to a single line item
- **Order-level discount** — apply a flat or percentage discount to the whole order
- **Promo codes** — customer enters a code, system applies the promotion automatically
- **Multiple payment methods:** Cash, Card, Bank Transfer, Pay Later, Split Payment, Cash on Delivery
- **Split payment** — divide a single sale across multiple methods (e.g., \$20 cash + \$15 card + \$10 pay later)
- **Pay Later / Credit** — record a debt against a named customer
- **Hold & resume** — park a sale mid-process and serve another customer
- **Customer attachment** — link a sale to a CRM customer for history tracking
- **Notes field** — add order notes visible on receipt
- **Receipt printing** — browser print dialog with formatted thermal receipt, store logo, VAT number, footer text
- **Digital receipt** — receipt shown on screen after sale completes
- **Void sale** — manager PIN required, full stock is restocked automatically
- **Return items** — partial or full return on any past sale with stock restock and refund tracking

Offline Mode: The POS uses an IndexedDB offline cache. If internet is lost, the cashier can continue selling. When connectivity returns, all sales sync automatically.

4.2 Products & Categories

Product Fields:

- Name, Barcode (auto-generated if empty), Price, Cost Price
- Category (with emoji icon)
- Stock quantity
- Product image (upload to Supabase or paste URL)
- Expiry date
- VAT Exempt toggle
- Online Store visibility toggle
- Product Variants (e.g., Small/Medium/Large, Red/Blue — each with own price and stock)

Category Management:

- Create, rename, delete categories
- Emoji/icon assigned to each category
- Products filter by category in POS grid

Smart Features:

- Products are auto-disabled when their expiry date passes
 - Low-stock warning (products with ≤ 5 units shown on dashboard)
 - Variant support: one product SKU, multiple sellable options, each tracked independently
-

4.3 Inventory & Batch Management

This is where MARKET-POS goes far beyond basic POS systems.

Batch Tracking: Every stock-in event creates a numbered batch with:

- Batch number (auto-generated)
- Supplier link
- Received date
- Expiry date
- Cost price at time of purchase
- Quantity received and remaining

FIFO Automatic Deduction: When a product is sold, the system deducts stock from the earliest-expiring batch first (First In, First Out). Batches with no expiry are consumed last. This prevents expired stock from sitting hidden in the warehouse.

Batch Status Dashboard:

Status	Meaning
Active	Has remaining quantity, not expired
Expiring Soon	Will expire within 30 days
Expired	Past expiry date, still has stock
Depleted	All units sold

Stock Log: Every stock movement is recorded with timestamp, who did it, and why:

- Sale (auto)
- Return (auto)
- Void (auto)
- Manual adjustment (+/-)
- Batch received
- Batch adjusted

Manual Stock Adjustment: Admin can add or remove units with a reason. Every adjustment is logged and audited.

4.4 Customer Management

Customer Profile:

- Name, phone, email, address, notes
- Total spent, total orders
- Outstanding balance (from Pay Later)
- Full purchase history (last 50 orders)

Pay Later / Credit Accounts: When a customer does not pay in full, the balance is tracked in a Hold Sale. Later payments are recorded and deducted from the balance. The cashier can see outstanding balances per customer and collect partial or full payments at any time.

Customer Ledger: Every interaction is timestamped — what they bought, how much they paid, what is still owed.

4.5 Discount & Promo System

Discount Types:

- Fixed amount off (e.g., \$5 off)
- Percentage off (e.g., 15% off)
- Applied at order level or per line item

Promo Codes:

- Create reusable or single-use codes
- Set usage limit (e.g., first 100 customers only)
- Set expiry date
- Discount is applied automatically when code is entered at checkout

Points Offers (Retail Loyalty):

- Configure points-per-currency-unit (e.g., 1 point per \$1 spent)
 - Customers accumulate points across orders
 - Redeem points against future purchases
-

4.6 Shift & Cash Drawer Management

This is essential for multi-cashier stores where you need to know exactly who handled what money.

Opening a Shift:

- Cashier counts the float (opening cash in drawer)
- Denominations entry: how many \$1, \$5, \$10, \$20 bills — system calculates total
- Shift opens and logs the opening float

During the Shift:

- All sales are linked to the active shift
- Cash In / Cash Out events (e.g., petty cash withdrawal, adding float) recorded with reason

Closing a Shift:

- Cashier counts the closing cash in drawer (with denomination breakdown)
- System calculates: Expected Cash = opening float + cash sales + paid-in – paid-out – refunds
- Variance = actual closing count – expected cash
- Full breakdown by payment method: Cash, Card, Bank Transfer, Pay Later, Cash on Delivery, Delivery
- Net revenue after refunds and discounts
- Shift report saved permanently

Shift History:

- All past shifts visible with full summary
 - Admin can review any cashier's shift at any time
-

4.7 Expense Tracking

Track business expenses directly inside the POS:

- Amount, category, description, date
 - Linked to store for reporting
 - Appears in profit/loss calculations
-

4.8 Supplier Management

- Create supplier profiles: name, contact, phone, email
 - Link batches to suppliers when receiving stock
 - Know which supplier delivered which batch and at what cost
 - AI reorder suggestions show supplier options alongside suggested quantities
-

4.9 Reports & Analytics

All reports support daily, weekly, monthly, and yearly periods.

Dashboard Overview:

- Today's sales and order count
- This week / month / year totals
- Pay Later outstanding balance and number of accounts
- Total products, total customers
- Low stock alerts (products with ≤ 5 units)
- Sales chart (by hour for today, by day for week/month, by month for year)
- Top 5 selling products

Sales Report:

- Full transaction list with search and filter
- Filter by product, customer name, sale ID, status
- Each sale shows: items, total, payment method, cashier, date

Profit & Loss Report:

- Revenue, COGS (cost of goods sold), discounts, refunds
- Gross profit and gross margin %
- Per-product breakdown: revenue, cost, quantity sold, profit, margin %
- Filter by any date range

Shift Reports:

- Every shift close generates a detailed report
- Cash variance tracking
- Per-payment-method breakdown

Café Reports (8 Sections):

1. Revenue — line chart + total/average
2. Peak Hours — 7×24 heatmap (when is your café busiest?)
3. Menu Performance — top and bottom items, category donut chart
4. Table Analytics — revenue and occupancy per table
5. Kitchen Efficiency — average prep time per category
6. Reservations — no-shows, fill rate, peak booking slots

- 7. Customer Loyalty — new vs. returning, tier breakdown, top 10 leaderboard
 - 8. Games Stats — most played games, win rates, points distributed
-

4.10 AI Business Intelligence

Powered by Google Gemini AI. Two engines built in:

AI Offer Suggestions:

The system analyzes every product's:

- Current stock level
- Average daily sales (last 60 days)
- Batch expiry dates
- Days-to-sell vs. days-to-expiry ratio
- Profit margin

Products that are moving too slowly or will expire before they sell are flagged. The AI generates specific, actionable promotional offers:

Example AI output:

"Sell 30 units of Whole Milk in 7 days — 20% off (still profitable at 15% margin)" Urgency: High | Type: Discount 20% | Expected impact: Clear batch #B-0042 before June 15

AI Reorder Suggestions:

Analyzes:

- Average daily sales velocity (last 30 days)
- Current stock level
- Days of stock remaining
- 7-day supplier lead time
- Target: maintain 30 days of stock

Generates a prioritized reorder list (urgent / normal / low) with exact suggested quantities and cost estimates. Admin reviews, adjusts quantities if needed, saves as a Purchase Order, and tracks it through: Pending → Approved → Ordered → Received.

How to use:

1. Go to **AI Insights** in the sidebar
 2. Click **"Offer Suggestions"** tab — see what to promote
 3. Click **"Reorder Suggestions"** tab — see what to order
 4. Adjust quantities → click **Save as Purchase Order**
 5. Track the order status in the Purchase Orders list
-

4.11 Lebanese VAT Compliance

Built specifically for Lebanese tax law.

Setup:

- Go to Store Settings → set Tax Rate = **11%** (Lebanese standard VAT)
- Enter your VAT Number (Tax Number) — appears on every printed receipt

Per-Product VAT Exemption: Not all products are taxed in Lebanon. Basic food staples, medicines, books, agricultural inputs, and educational materials are exempt. Each product has a **VAT Exempt** toggle. Mark exempt products once; the system handles everything else automatically.

How VAT is calculated at checkout:

1. System sums the subtotal of all non-exempt items = Vatable Amount
2. VAT = Vatable Amount × 11%
3. Total = Subtotal + VAT – Discounts

On receipts:

- Subtotal (before VAT)
 - VAT amount (11%)
 - Total
 - Your VAT number (as required by Lebanese law)
-

4.12 Online Store & Delivery Module

Turn any store into an online shop in one click.

Activation:

- Go to Store Settings → Online Store tab
- Toggle "Online Store Active"
- Set delivery fee and minimum order
- Set estimated delivery time range (e.g., 30–60 min)
- Share the store link or print the QR code for your storefront

Customer Experience (Store Frontend):

1. Customer visits your store URL: `yourstore.com/store/your-slug`
2. Browses products by category with search and images
3. Adds items to a floating cart
4. Registers/logs in or continues as guest
5. Enters delivery address
6. Chooses payment: Bank Transfer or Cash on Delivery
7. Places order
8. Receives real-time order status updates (pending → accepted → out for delivery → delivered)

Admin Experience:

1. New order notification arrives in the **Online Orders** page
2. Admin reviews the order (items, address, payment method)
3. Clicks **Accept** — the cart is automatically injected into the cashier's POS screen
4. Cashier processes as a delivery sale (cash on delivery or bank transfer)
5. Order status updates to "Out for Delivery" automatically
6. Driver delivers and confirms cash payment

Telegram Driver Notifications:

- Configure your delivery drivers' Telegram chat IDs in Store Settings
- When an order is accepted, a formatted message is sent to the driver via Telegram Bot:
 - Customer name
 - Address
 - Items list

- Payment method
- Total amount

Per-Product Online Visibility: Each product has an "Available Online" toggle. You can sell items in-store that are not listed online, and vice versa.

4.13 Café Module — Staff Side

A complete café/restaurant management system, enabled per-store by the SuperAdmin.

Floor Map:

- Visual grid showing all tables
- Table colors: Green (free), Red (occupied), Yellow (bill requested)
- Click any table to open its order
- Drag tables to new positions in the settings layout editor
- Real-time updates via WebSocket — all staff see the same map simultaneously

Table Order Modal:

- Browse menu by category, add items with quantity
- Add modifier notes per item (e.g., "no sugar", "extra shot")
- Send items to kitchen (status: Pending Kitchen → Kitchen)
- Transfer selected items to another table
- Merge two tables (all items move, source table freed)
- View all items with their kitchen status

Kitchen Display System (KDS):

- Full-screen kitchen dashboard
- Shows all open orders grouped by table
- Items categorized as: Pending → Preparing → Ready → Served
- Click any item to cycle its status
- Audio alert (Web Audio API beep) when a new order arrives in the kitchen
- Items from customer QR orders show a "📱 Customer" badge so kitchen knows the source

Bill / Checkout:

- Service charge (configurable %)
- Apply discount
- Split the bill across any number of guests — each guest pays their share
- Multiple payment methods
- Checkout creates a Sale (type: "café") and frees the table automatically

Reservations:

- Create reservations: name, phone, date, time, table, guest count, notes
- Calendar view by date
- Convert a reservation into an active table order with one click
- Reservation list with status (confirmed, seated, cancelled, no-show)

Café Settings:

- Manage tables: add, rename, drag to position
- Print QR code per table → customer scans to order from their phone
- Configure loyalty: rewards CRUD, trivia questions, points-per-item

- Customer list: view all registered loyalty members, manually adjust points

4.14 Café Customer App & Gamification

Customers scan the QR code on their table and open the app on their phone. No download required — it is a web app.

Two Modes:

Quick Menu (Guest):

- No account needed
- Browse the menu, add items, place order
- Order goes straight to kitchen and appears on the floor map
- Track order status live
- Play games for entertainment (no points)

Play & Earn (Registered):

- Register with phone + password, or sign in with Google
- First visit: +100 welcome points
- Daily check-in: +10 points
- Order items: +10 points per item × tier multiplier
- Rate your order: +5 points
- Play games once per day to earn points
- Redeem points for free items or discounts

Loyalty Tiers:

Tier	Points Range	Order Multiplier
Bronze	0 – 999	×1.0
Silver	1,000 – 4,999	×1.25
Gold	5,000 – 9,999	×1.5
Diamond	10,000+	×2.0

5 Games (1 per day earns points, unlimited play for fun):

1. Slot Machine Three reels with coffee-themed symbols (☕ 🍰 🍪 🌟). Three matching stars = 500 pts. Three matching = 200 pts. Two matching = 50 pts. No match = 10 pts consolation.

2. Scratch Card A 3×3 grid on a canvas. Drag your finger to scratch. Match 3 identical symbols to win: Coin = 50 pts, Gem = 150 pts, Crown = 300 pts.

3. Spin Wheel 8 animated segments spin around. Prizes: 25/50/75/100/200 pts, free add-on, double order points, 15 pts.

4. Mystery Box Three face-down cards. Pick one. It reveals a points prize (50/100/200/300/500) or a special "50% off item" reward.

5. Trivia Challenge 3 multiple-choice questions (set by the café admin). 30-second timer per question. 30 pts per correct answer + 20 pt streak bonus for a perfect score.

Rewards Redemption: Before placing an order, the customer taps "Use Points" to select from available rewards (free item, % discount, flat discount). The reward is deducted from their order total automatically.

Live Order Tracking: After placing an order, the customer sees a live status screen that updates in real time as the kitchen prepares and serves the order. After the order is served, they are prompted to rate it (1–5 stars + comment) and can play a game.

4.15 Multi-Store SuperAdmin Panel

The SuperAdmin is the platform operator — the person who sells MARKET-POS as a service.

Platform Overview Dashboard:

- Total stores, active stores
- Total users, total products across all stores
- Total revenue across all stores
- Store growth chart (last 6 months)
- Revenue by month chart
- Plan distribution (Trial/Basic/Pro/Enterprise)
- Expiring soon count (within 7 days)
- Activity feed: recent sales, new users, new stores

Per-Store Management:

- View full store details: users, products, recent sales, audit logs
- Enable / Disable a store (locked out on disable)
- Toggle Café Module on/off per store
- Toggle Online Store on/off
- Update subscription plan (Trial/Basic/Pro/Enterprise)
- Set plan expiry date
- Set monthly price
- Extend plan (add days)
- Add internal notes about the client
- Send a notification/alert to the store's admin panel
- Bulk notify multiple stores at once
- Bulk enable/disable stores
- Bulk extend plans

User Management per Store:

- View all users with their sales stats (total revenue, today revenue, order counts)
- Create new users (admin, cashier)
- Change user role
- Reset password
- Enable/disable user accounts
- Force logout a user from all devices
- Force logout a specific device
- Set max concurrent devices per user
- View per-user sales history

Café Staff Management (SuperAdmin):

- Create, update, delete café staff (managers, kitchen, servers)
- Set roles and activation status

Impersonation: The SuperAdmin can log in as any store's admin with a single click for support or demos — without knowing the client's password.

Store Creation:

- Create a store of type: Market, Café, or Both (Market + Café)
- Set plan, user limits, product limits
- Creates admin user and/or café manager automatically
- Auto-generates a unique URL slug for the online storefront

Store Cloning: Clone an existing store's structure (categories, settings) into a new store — ideal for franchise clients.

Ownership Transfer: Transfer a store to a new owner (new admin username) without losing any data.

Data Export: Export all stores to a JSON/CSV format: name, owner, plan, status, expiry, users, products, revenue, monthly price.

4.16 Security & Audit Log

Every action in the system is recorded. Nothing is ever invisible.

Audit Log tracks:

- Login / Logout (with IP address and device)
- Sale created, voided, returned
- Product created, updated, deleted
- Stock adjusted (manual)
- Batch received
- Customer created, updated
- Café table opened, order sent to kitchen, checkout
- Price changes, category changes, settings changes

Device Security:

- Each user has a configurable maximum number of concurrent device sessions
- Logging in on a new device beyond the limit forces logout of the oldest session
- SuperAdmin can force-logout any device of any user remotely

Void PIN: A store can set a manager PIN. Any sale void requires the PIN — preventing cashiers from voiding sales without authorization.

4.17 Telegram Delivery Notifications

When an online order is dispatched:

1. The system sends a Telegram message to one or more configured delivery drivers
2. The message contains: customer name, full delivery address, ordered items, total, and payment method
3. Driver confirms delivery from their phone

Setup: Go to Store Settings → Delivery tab → Enter your Telegram Bot Token and each driver's Chat ID.

5. Demo Walkthrough — Step by Step

Demo 1: Standard Checkout (2 minutes)

1. Open the POS screen
2. Scan a product barcode or click a category tile
3. Add 3 different products
4. Apply a 10% order discount
5. Select payment method: Split (Cash + Card)
6. Click Checkout → receipt appears on screen
7. Click Print Receipt → formatted thermal receipt opens

Demo 2: Delivery Order Flow (3 minutes)

1. Open the online storefront URL
2. Browse products, add 2 items to cart
3. Go to checkout → enter address → pay Cash on Delivery → place order
4. Switch to admin POS → Online Orders page — new order appears
5. Click Accept → go to POS screen → cart is auto-injected
6. Complete sale as delivery type
7. Driver receives Telegram message with order details

Demo 3: Café Table Service (3 minutes)

1. Open Café app → Floor Map shows all tables
2. Click Table 3 (green = free) → Open Table
3. Add items from menu (e.g., 2 Lattes, 1 Croissant)
4. Click Send to Kitchen
5. Switch to Kitchen Display (KDS) → items appear instantly with audio beep
6. Click each item to mark as Preparing → Ready → Served
7. Back on floor map → click Table 3 → View Bill → apply service charge → Checkout

Demo 4: Customer QR Order (2 minutes)

1. Show the QR code printed for Table 3
2. Scan QR on phone → Café Landing page opens
3. Choose "Quick Menu" → browse items → add to cart → place order
4. On KDS: the order appears with  Customer badge
5. Floor map updates: Table 3 turns orange (has customer order)

Demo 5: AI Insights (2 minutes)

1. Go to AI Insights in sidebar
2. Click "Offer Suggestions" → AI analyzes stock and shows which products need promotions
3. Read the suggestions: each shows urgency, offer type, reasoning, expected impact
4. Click "Reorder Suggestions" → AI shows what to order, quantity, and estimated cost
5. Adjust one quantity → click "Save as Purchase Order"
6. Open Purchase Orders → track it from Pending → Approved → Ordered → Received

Demo 6: Shift Close (2 minutes)

1. Click Shift Panel in sidebar
2. Cashier enters denomination count: 10×\$1, 5×\$5, 2×\$10 = \$60
3. Click Close Shift → system calculates expected cash
4. See variance (over/short) — if there is an unexplained difference, it is flagged
5. Shift is saved with full breakdown by payment method

Demo 7: Gamified Loyalty (3 minutes)

1. Scan table QR → choose "Play & Earn" → Register with phone
2. Get +100 welcome points, tier = Bronze
3. Browse menu → order 3 items → earn +30 points (3 items × 10)
4. Go to Game Hub → play Slot Machine → win 50 points
5. Go to Rewards page → see available rewards
6. Next order: tap "Use Reward" → apply Free Item → checkout at 0 cost

6. Subscription Plans & Pricing

Plans are managed and priced by you (the SuperAdmin). The system enforces limits automatically.

Plan	Users	Products	Features
Trial	2	100	All features, 14 days
Basic	5	500	All features
Pro	20	2,000	All features
Enterprise	100	Unlimited	All features + priority support

Module Pricing (optional add-ons you can charge for):

- Café Module: enabled/disabled per store in SuperAdmin
- Online Store: enabled/disabled per store in SuperAdmin

Monthly price is set per store in the SuperAdmin panel and tracked for billing reference.

7. Technical Stack & Deployment

Architecture

```
Backend (Node.js + Express)
├─ MongoDB (data store, fully cloud-hosted)
├─ Supabase (product image storage)
├─ Socket.io (real-time: floor map, KDS, order inject)
├─ Google Gemini AI (offer & reorder AI engine)
├─ Telegram Bot API (delivery notifications)
└─ JWT + device session auth

Frontend POS (React + Vite + Tailwind CSS)
├─ Deployed on Vercel
├─ IndexedDB offline cache (idb-keyval)
└─ Real-time socket client

Online Store Frontend (React + Vite + Zustand)
├─ Deployed on Vercel
└─ Mobile-first responsive design

Café App (React + Vite – standalone)
├─ Staff app + Customer QR app in one deploy
```

- └─ Deployed on Railway or Vercel
- └─ Canvas-based scratch card game

Deployment Options

Component	Platform
Backend API	Railway
Main POS Frontend	Vercel
Online Store Frontend	Vercel
Café App	Railway
Database	MongoDB Atlas
Image Storage	Supabase

Language & Localization

- Arabic and English interface
- All UI strings are in i18n translation files — new languages can be added without code changes
- Currency and currency symbol configurable per store
- RTL support

For questions, demos, or sales inquiries, contact the development team.

Documentation covers MARKET-POS platform as of May 2026.
